Supplies:

- Flat Memory Wire
- Artistic wire in 24 or 26 Gauge

Tools:

- Memory Wire Shears

- Step Looping Pliers

- Chain Nose Pliers

- Flush Cutters

1. Decide how many loops of memory wire you want around your wrist & Cut with your memory wire shears. DO NOT use your regular flush cutters or the wire will dull them.

2. Round one end of your flat memory wire with your stepped round pliers.

3. Use your flush cutters to trim the loop off of the end of your Rhinestone Chain.

4. Lay the end of your chain against the flat memory wire. You don't have to have it against the loop yet.

5. Cut a comfortable length of Artistic wire wire to work with. I use about 20" to 1 Yard.

6. Wrap around the space between the first 2 "cups" and the flat memory wire twice. Leave a 2" tail. Grab the tail with your chain nose pliers and wrap it around the flat memory wire above the first "cup".

7. Slide the wraps up against the memory wire loop. Press the Artistic wire wraps with your chain nose pliers to set them. Trim the end of the Artistic wire with your flush cutters.

8. Continue wrapping once in between each cup and around the flat memory wire.

9. Trim your cup chain when you get near the end of your bracelet with your flush cutters.

10. Continue wrapping to the end. It's ok if it does not reach to the other side exactly.

Wrap 4-5 times around the end. Go over the entire bracelet gently moving the chain where needed to ease it all the way to the end. Trim the end of the Artistic wire with your flush cutters and use your chain nose pliers to press the wraps down to finish.
